### **eno energy's foreign business is picking up: Sale of wind farm in France and expansion of activities in Sweden**

(Rostock/Berlin 18 January 2016) – With the sale of the Mohon Wind Farm in France at the end of 2015 and the expansion of its activities in Sweden, eno energy is sending positive signals for the further development of its foreign business.

The construction work for Mohon Wind Farm in Brittany has already commenced. The wind farm, which has been sold to CEE Wind-Beteiligungs GmbH & Co. KG and Lampe Alternative Investments S.A., is scheduled to begin operation in the middle of the year with 20 MW rated output and a hub height of 105 metres.

“With Mohon, we were particularly delighted to be able to sell a large project from our French pipeline,” says eno energy’s Commercial Director, Robert Jantzen. “We are working on the continuous implementation of our projects and already have our eyes set on the next eno wind farm in the Pays de la Loire region.”

In Sweden, wind turbines with a total rated output of 11 MW were brought into operation and sold in 2015. Further eno 100 wind turbines are about to be erected. “Our Swedish customers are very satisfied, not least because of the high yields attained with the eno 100 – peak values of up to 4,000 MWh per turbine were achieved in the second half of 2015. For 2016 we expect incoming orders from there similar to last year,” adds Robert Jantzen. “The continuously growing number of eno wind turbines in Sweden and the conclusion of further contracts make the creation of a service company on the ground essential in order to further improve the service for our customers.”

In addition to the projects sold abroad, eno energy also successfully completed several transactions in Germany during the past year. The 24 wind turbines sold with a capacity of 63.8 MW include the Plauerhagen Wind Farm with 21 MW to DEW 21 Windkraftbeteiligungsgesellschaft mbH and the Giesensdorf Wind Farm with 6.6 MW to a Danish investor.

## About eno energy

The eno energy Group, which manufactures wind turbines and is headquartered in Rostock and Rerik, produces wind turbines for the onshore sector with rated outputs of 1.5 to 3.5 megawatts and rotor diameters between 82 and 126 metres. The wind turbines developed by the eno Group meet the highest quality standards, and their design and individual assemblies are aimed at achieving highest availability, durability and exceptionally high yields in various wind farm configurations. The corporate group is positioned in national and international markets as both a wind turbine manufacturer and service provider. Its considerable flexibility and reliability makes eno energy a competent partner for investors and project developers in Germany and within its European markets abroad.
