

## Press release

### **First eno wind turbine established abroad eno 92 rotates in Southern Sweden**

Rostock, 08/05/ 2013

In Sweden the first eno wind power plant is built outside of Germany. The eno 92 with 2.2 MW has a height of 103 meters and rotates on a private estate in Floby, this is a place in the community Falköping, in the middle of the Great Lakes of Vänern and Vättern and is located approximately 120 km northeast of Gothenburg. The customers of the wind turbines are a community of local farmers, entrepreneurs and local landowners.

The managing director of the Swedish subsidiary eno energy sweden AB, Gert-Olof (Måns) Holst, is pleased with the quick success of the company: "The agreement on a second machine, an eno 100 at 99 m hub height, was recently signed and the installation takes place in the second half of 2013.

His years of experience in the wind energy and his excellent contacts within industry are helpful to make eno energy well known as a manufacturer in Scandinavia and to establish appropriate references.

And also the co-development with Swedish developers should help to enlarge the opportunities to deliver the eno technique to Sweden: a project with three wind turbines in Småland, another project with two plants in the province Västra Götaland and a Finnish project with seven machines are already real examples.

There is also a great interest among private persons, farmers and small developers who want to build single turbines and even medium-sized utilities already ask – this makes us optimistic about the future.

#### About the eno energy systems GmbH

The eno energy systems GmbH, seated in Rostock, is a manufacturer of onshore wind turbines with rated power outputs from 2.05 MW up to 3.5 MW and rotor diameters from 82 meters to 126 meters. The wind turbine development is focused on durability and is realized only with well-known suppliers. The company is positioned as wind turbine manufacturer and as a supplier of services for national and international markets. Furthermore, the eno energy systems GmbH is characterized as a qualified partner for municipal investors and multinational project developers.
